During your practice of the NSE7_PBC-6.4 preparation guide, you will gradually change your passive outlook and become hopeful for life.

NEW QUESTION: 1Windows Server

2016を実行するVM1という名前のAzure仮想マシンがあります。

VM1に基幹業務アプリケーションをインストールします。

VM1をカスタムイメージとして使用して、Azure仮想マシンを作成する必要があります。

順番に実行する必要がある3つのアクションはどれですか？回答するには、適切なアクションをアクションのリストから回答エリアに移動し、正しい順序に並べます。**Answer:** Explanation:

Explanation Step 1: Run sysprep.exe on VM1.If a template, or system image is used, System administrators must run the Sysprep tool to clear the SID information. The Sysprep tool is usually one of the last tasks performed by a system administrator when building a server image/template, that way each clone of the template will generalize a new unique SID for every server image copied from the template and will prepare the server for a first time boot.The end result is a System template that functions as a new unique build every time it is deployed.Step 2: From Azure CLI, deallocate VM1 and mark VM1 as generalizedTo create an image, the VM needs to be deallocated. Deallocate the VM with Stop-AzVm. Then, set the state of the VM as generalized with Set-AzVm so that the Azure platform knows the VM is ready for use a custom image Step 3: Create a virtual machine scale set Now create a scale set with New-AzVmss that uses the -ImageName parameter to define the custom VM image created in the previous step.
