This configuration does not apply password encryption correctly. The command service enable-password- encryption is incorrect. The correct command is service password-encryption. Answer A is incorrect. This configuration applies the login command to the VTY lines. This would require the password to be set at the VTY Line 0 4 level. This effectively will not configure user-level access for the VTY lines. Answer B is incorrect. The enable password command is obsolete and considered insecure. The proper command is enable secret followed by the password value.
