The quality of our C-BW4H-214 exam quiz deserves your trust, We are providing you with this facility because of the value of money, Besides, you can enjoy free updates for one year as long as you buy our exam dumps.

**NEW QUESTION: 1**A company has a cluster consisting of 384GB of RAM.- Virtual machines in the production pool must run without contention of any memory resources with the other pools, while Development and QA VMs do not share this restriction.- QA VMs are considered the least important in this environment.Which resource pool design would achieve the company's requirements without introducing unnecessary contention?**A.** Option**B.** Option**C.** Option**D.** Option**Answer: B**

**NEW QUESTION: 2**You execute the following command to set the redundancy retention policy in Recovery Manager (RMAN):RMAN> CONFIGURE RETENTION POLICY TO REDUNDANCY 3; Identify the statement that correctly describes the implications of this command.**A.** when there are already three backup, one of the existing backups must be removed manually before takingthe fourth backup.**B.** When there are already three backups, for the fourth backup RMAN marks the oldest backup as obsolete.**C.** the number of backups that are retained is equal to three and it includes full, incremental, and cumulativebackups.**D.** when there are already three backups, for the fourth backup RMAN removes the oldest backup.**Answer: B**Explanation: Configuring a Redundancy-Based Retention Policy The REDUNDANCY parameter of the CONFIGURE RETENTION POLICY command specifies how many full or level 0 backups of each data file and control file that RMAN should keep. If the number of full or level 0backups for a specific data file or control file exceeds the REDUNDANCY setting, then RMAN considers the extra backups as obsolete. The default retention policy is REDUNDANCY 1. As you produce more backups, RMAN keeps track of which ones to retain and which are obsolete. RMAN retains all archived logs and incremental backups that are needed to recover the non obsolete backups. Assume that you make a full backup of data file 7 on Monday, Tuesday, Wednesday, and Thursday. You now have four full backups of this data file. If REDUNDANCY is 2, then the Monday and Tuesday backups are obsolete. If you make another backup on Friday, then the Wednesday backup of data file 7 becomes obsolete. Assume a different case in which REDUNDANCY is 1. You run a level 0 database backup at noon on Monday, a level 1 cumulative backup at noon on Tuesday and Wednesday, and a level 0 backup at noon on Thursday. Immediately after each daily backup you run the command DELETE OBSOLETE. The Wednesday DELETE command does not remove the Tuesday level 1 backup because this backup is not redundant: the Tuesday level 1 backup could be used to recover the Monday level

0 backup to a time between noon on Tuesday and noon on Wednesday. However, the DELETE command on Thursday removes the previous level 0 and level 1 backups. Run the CONFIGURE RETENTION POLICY command at the RMAN prompt, as in the following example: CONFIGURE RETENTION POLICY TO REDUNDANCY 3;

**NEW QUESTION: 3** You need to create a discount list for ticket sales. Which pricing methods should you use? To answer, select the appropriate method in the dialog box in the answer area. NOTE: Each correct selection is worth one point. **Answer:** Explanation:Explanation
