NEW QUESTION: 1A security administrator determines several months after the first instance that a local privileged user has been routinely logging into a server interactively as "root" and browsing the Internet. The administrator determines this by performing an annual review of the security logs on that server. For which of the following security architecture areas should the administrator recommend review and modification? (Select TWO).**A.** Network isolation and separation**B.** Encryption**C.** Password complexity**D.** Acceptable use policies**E.** Software assurance**F.** Log aggregation and analysis**Answer: D,F**

NEW QUESTION: 2A technician has the ISO image of an OS that they need to install on a server in a remote location. They are already logged into the iDRAC. How should the technician install the OS?**A.** Click Launch under the Virtual Console Preview, reboot the server into F10 and start the Lifecycle Controller OS Deployment wizard**B.** Click Launch under the Virtual Console Preview Select Next Boot, and choose Virtual CD/DVD/ISO**C.** Click on Update and Rollback under Quick launch Tasks**D.** Click Launch under the Virtual Console Preview and then connect to Virtual Media**Answer: B**

NEW QUESTION: 3Which concept BEST describes the capability for a cloud environment to automatically scale a system or application, based on its current resource demands?**A.** Measured service**B.** Rapid elasticity**C.** Resource pooling**D.** On-demand self-service**Answer: B**
Explanation:ExplanationRapid elasticity allows a cloud environment to automatically add or remove resources to or from a system or application based on its current demands. Whereas a traditional data center model would require standby hardware and substantial effort to add resources in response to load increases, a cloud environment can easily and rapidly expand to meet resources demands, so long as the application is properly implemented for it.
