NEW QUESTION: 1 You have the hierarchy of Azure resources shown in the following exhibit. You create the Azure Blueprints definitions shown in the following table. To which objects can you assign Blueprint1 and Blueprint2? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Explanation Blueprints can only be assigned to subscriptions.

NEW QUESTION: 2

どのセキュリティCiscoルータのコントロールプレーンを保護することができます対策？
(2を選択してください。) **A. CoPP** **B. ポートセキュリティ** **C. パーサー見解** **D. アクセス制御リスト** **E. CCP** **Answer: A, E** **Explanation:** Three Ways to Secure the Control Plane+ Control plane policing (CoPP): You can configure this as a filter for any traffic destined to an IP address on the router itself.+ Control plane protection (CPPr): This allows for a more detailed classification of traffic (more than CoPP) that is going to use the CPU for handling.+ Routing protocol authentication For example, you could decide and configure the router to believe that SSH is acceptable at 100 packets per second, syslog is acceptable at 200 packets per second, and so on. Traffic that exceeds the thresholds can be safely dropped if it is not from one of your specific management stations. You can specify all those details in the policy. You learn more about control plane security in Chapter 13, "Securing Routing Protocols and the Control Plane." Selective Packet Discard (SPD) provides the ability to Although not necessarily a security feature, prioritize certain types of packets (for example, routing protocol packets and Layer 2 keepalive messages, route processor [RP]). SPD provides priority of critical control plane traffic which are received by the over traffic that is less important or, worse yet, is being sent maliciously to starve the CPU of resources required for the RP. NEW QUESTION: 3 An application developer is creating a task list template. How can the developer include process variables in the task list? **A. Select the include process variables**

check box in the task list wizard.**B.** Include process variables in the search criteria.**C.** Disable ACLs on process variables.**D.** Display tasks from a single process.**Answer: D**

NEW QUESTION: 4You have a Windows 10 Enterprise computer. The computer has a shared folder named C:Marketing. The shared folder is on an NTFS volume. The current NTFS and share permissions are configured as follows. UserA is a member of both the Everyone group and the Marketing group. UserA must access C:Marketing from across the network. You need to identify the effective permissions of UserA to the C:Marketing folder. What permission should you identify?**A.** Read and Execute**B.** Modify**C.** Full Control**D.** Read**Answer: B**
Explanation/Reference: Explanation: UserA is a member of both the Everyone group and the Marketing group and UserA must access C:Marketing from across the network. When accessing a file locally, you combine the NTFS permissions granted to your account either directly or by way of group membership. The 'least' restrictive permission is then the permission that applies. In this question, the NTFS permission is the least restrictive of Read/Execute and Modify... so Modify is the effective permission. When accessing a folder or file across the network, you combine the effective NTFS permissions (Modify in this case) with the effective Share permissions granted to your account either directly or by way of group membership (Full Control in this case). The 'most' restrictive permission is then the permission that applies. Modify is more restrictive than Full Control so Modify is the effective permission. Incorrect Answers: A: The effective permission is Modify, not Full Control. B: The effective permission is Modify, not Read and Execute. C: The effective permission is Modify, not Read.
