"Evaluate target health"를 켜고 "Associate with Health Check"를 끄면 R53이 ELB의 내부 상태 확인을 사용합니다.**D.** Route 53은 내부 상태 확인이 있는 ELB를 지원하지 않습니다. ELB에 대한 리소스 레코드 세트를 자체 상태 확인과 연결해야 합니다.

Answer: C**Explanation:**With DNS Failover, Amazon Route 53 can help detect an outage of your website and redirect your end users to alternate locations where your application is operating properly. When you enable this feature, Route 53 uses health checks--regularly making Internet requests to your application's endpoints from multiple locations around the world--to determine whether each endpoint of your application is up or down. To enable DNS Failover for an ELB endpoint, create an Alias record pointing to the ELB and set the "Evaluate Target Health" parameter to true. Route53 creates and manages the health checks for your ELB automatically. You do not need to create your own Route 53 health check of the ELB. You also do not need to associate your resource record set for the ELB with your own health check, because Route 53 automatically associates it with the health checks that Route 53 manages on your behalf. The ELB health check will also inherit the health of your backend instances behind that ELB.**Reference:**
