The desktop support director has asked the Information Security department to determine if any changes were made to the source image. Which of the following methods would BEST help with this process? (Select TWO).**A.** Calculate a new hash and compare it with the previously captured image hash.**B.** Parse all images to determine if extra data is hidden using steganography.**C.** Retrieve source system image from backup and run file comparison analysis on the two images.**D.** Check key system files to see if date/time stamp is in the past six months.**E.** Ask desktop support if any changes to the images were made.**Answer: A,C**
Explanation:Running a file comparison analysis on the two images will determine whether files have been changed, as well as what files were changed.Hashing can be used to meet the goals of integrity and non-repudiation.
