**NEW QUESTION: 4**In an aggregate using a RAID-DP raid group, what is the minimum number of disks that are needed to create an aggregate so that it contains three data disks?**A. 3 disksB. 9 disksC. 7 disksD. 5 disksAnswer: A**  
Explanation: The minimum number of disks in a RAID-DP group is three: at least one data disk, one regular parity disk, and one double-parity (or dParity) disk. If there is a data-disk or parity-disk failure in a RAID-DP group, Data ONTAP replaces the failed disk in the RAID group with a spare disk and uses the parity data to reconstruct the data of the failed disk on the replacement disk. If there is a double-disk failure, Data ONTAP replaces the failed disks in the RAID group with two spare disks and uses the double-parity data to reconstruct the data of the failed disks on the replacement disks. RAID-DP is the default RAID type for all aggregates.
