Explanation: You might need to change the location where WSUS stores updates locally. This might be required if the disk becomes full and there is no longer any room for new updates. You might also have to do this if the disk where updates are stored fails and the replacement disk uses a new drive letter. You accomplish this move with the movecontent command of WSUSutil.exe, a command-line tool that is copied to the file system of the WSUS server during WSUS Setup. By default, Setup copies WSUSutil.exe to the following location: WSUSInstallationDrive:\Program Files\Microsoft Windows Server Update Services\Tools
