**NEW QUESTION: 3** The security administrator finds unauthorized tables and records, which were not present before, on a Linux database server. The database server communicates only with one web server, which connects to the database server via an account with SELECT only privileges. Web server logs show the following:  
90.76.165.40 - - [08/Mar/2014:10:54:04] "GET calendar.php?create%20table%20hidden HTTP/1.1" 200 572490.76.165.40 - -  
[08/Mar/2014:10:54:05] "GET ../../../../root/.bash\_history HTTP/1.1" 200 572490.76.165.40 - -  
[08/Mar/2014:10:54:04] "GET index.php?user=<script>Create</script> HTTP/1.1" 200 5724

root root 4096 Mar 8 09:30 .sshWhich of the following attacks was used to compromise the database server and what can the security administrator implement to detect such attacks in the future? (Select TWO).**A.** Cross-site scripting**B.** Using input validation, ensure the following characters are sanitized: <>**C.** Set an account lockout policy**D.** Update crontab with: find / ( -perm -4000 ) -type f -print0 | xargs -0 ls -l | email.sh**E.** Privilege escalation**F.** Brute force attack**G.** SQL injection**H.** Implement the following PHP directive: \$clean\_user\_input = addslashes(\$user\_input)**Answer: D, E****Explanation:**This is an example of privilege escalation. Privilege escalation is the act of exploiting a bug, design flaw or configuration oversight in an operating system or software application to gain elevated access to resources that are normally protected from an application or user. The question states that the web server communicates with the database server via an account with SELECT only privileges. However, the privileges listed include read, write and execute (rwx). This suggests the privileges have been 'escalated'. Now that we know the system has been attacked, we should investigate what was done to the system. The command "Update crontab with: find / ( -perm -4000 ) -type f -print0 | xargs -0 ls -l | email.sh" is used to find all the files that are setuid enabled. Setuid means set user ID upon execution. If the setuid bit is turned on for a file, the user executing that executable file gets the permissions of the individual or group that owns the file.
