NEW QUESTION: 1 An application developer has been asked to add client-side validation for the start and end dates of Web Activities in the Management Center Marketing tool. What is the first step the application developer needs to perform to add the new validation?**A.** Create a new class that extends wcfValidator.**B.** Create a custom validation service that extends wcfValidateService.**C.** Extend the change mediator class and implement the validateCreate and validateChange methods.**D.** Write validation script in WebActivityPrimaryObjectDefinition.lzx.
Answer: A

NEW QUESTION: 2A network administrator is deploying virtualization software to several desktop computers Some of the Installations fall because a processor function Is disabled In the computer's BIOS. Which of the following functions should be turned on for the installation to succeed?**A.** VT-x**B.** Trusted Platform Module**C.** VNC**D.** Hyperthreading**Answer: D**

NEW QUESTION: 3 You plan to deploy a critical line-of-business application to Azure.The application will run on an Azure virtual machine.You need to recommend a deployment solution for the application. The solution must provide a guaranteed availability of 99.99 percent.What is the minimum number of virtual machines and the minimum number of availability zones you should recommend for the deployment? To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point.
Answer: Explanation:ExplanationYou need a minimum of two virtual machines with each one located in a different availability zone.Availability Zones is a high-availability offering that protects your applications and data from datacenter failures. Availability Zones are unique physical locations within an Azure region. Each zone is made up of one or more datacenters equipped with independent power, cooling, and networking. To ensure resiliency, there's a minimum of three separate zones in all enabled regions. The physical separation of Availability Zones within a region protects applications and data from datacenter failures. Zone-redundant services replicate your applications and data across Availability Zones to protect from single-points-of-failure. With Availability Zones, Azure offers industry best 99.99% VM uptime SLA.References:https://docs.microsoft.com/en-us/azure/availability-zones/az-overview
