NEW QUESTION: 1A company is using a model that was created in Compatible Query Mode (CQM). There is a report that must reference query subjects from two different packages. How can this be accomplished?**A.** The report author can add multiple packages to the reports as Data sources and create the report as needed.**B.** The report author cannot create reports that reference multiple Data sources.**C.** The report author must use SQL nodes for all queries that reference the data items in the two packages and join them appropriately to get the desired results within the report.**D.** The report author can use user-defined SQL to develop the query from one of the packages and the other package to develop the other query and then join them appropriately to get the desired results within the report.**Answer: D**

NEW QUESTION: 2**A.** Option **D**. Option **B**. Option **C**. Option **A****Answer: D****Explanation:** ExplanationA distribution group is a mail-enabled Active Directory distribution group object that can be used only to distribute messages to a group of recipients. In this question, we have a hybrid deployment. This means that the on-premise Active Directory is synchronized to the Azure Active Directory. We can create the distribution group in the on-premise Active Directory and it will replicate to Azure Active Directory. The Mail Flow Settings can be configured to control which users can send email messages to the group. In the Mail Flow Settings tab, double-click on Mail Delivery Restrictions to open the Mail Delivery Restrictions page. On this page, there is an "Accept Messages From.." section. In this section, select the "Only senders in the following list:" option. This will give you the option to list who can send email to the distribution group. References:
