**NEW QUESTION: 2**A system administrator has made several unauthorized changes to the server cluster that resulted in a major outage. This event has been brought to the attention of the Chief Information Office (CIO) and he has requested immediately implement a risk mitigation strategy to prevent this type of event from reoccurring.Which of the following would be the BEST risk mitigation strategy to implement in order to meet this request?**A.** Incident Management**B.** Asset Management**C.** Change Management**D.** Configuration Management  
**Answer: C**

**NEW QUESTION: 3**A risk analysis should:**A.** give more weight to the likelihood vs. the size of the loss.**B.** assume an equal degree of protection for all assets.**C.** address the potential size and likelihood of loss.**D.** include a benchmark of similar companies in its scope.**Answer: C**  
Explanation:A risk analysis should take into account the potential size and likelihood of a loss. It could include comparisons with a group of companies of similar size. It should not assume an equal degree of protection for all assets since assets may have different risk factors. The likelihood of the loss should not receive greater emphasis than the size of the loss; a risk analysis should always address both equally.
