NEW QUESTION: 2Claudia would like to set up an IBM WebSphere Portal cluster. Which of the following limitations apply when setting up a WebSphere Portal cluster?**A.** All of the above.**B.** She must install WebSphere Portal as a stand-alone node before creating a cluster. She can no longer install WebSphere Portal into a managed node.**C.** Administrative actions for WebSphere Portal are immediately visible for the user who completes them. However, another user can be assured of seeing the changes only if the user logs out of WebSphere Portal and then logs back in. This limitation applies to both cluster and non-cluster environments.**D.** In a clustered environment, it is not possible to change settings through the Global Settings portlet or the XML configuration interface. These changes must be made by modifying the respective properties in the IBM WebSphere Integrated Solutions Console.**E.** To support search in a clustered environment, Claudia must install and configure search for remote search service on an application server node that is not part of the cluster**Answer: A**

NEW QUESTION: 3Which statement below is NOT correct about safeguard selection in the risk analysis process?**A.** The best possible safeguard should always be implemented, regardless of cost.**B.** Maintenance costs need to be included in determining the total cost of the safeguard.**C.** Many elements need to be considered in determining the total cost of the safeguard.**D.** The most commonly considered criteria is the cost effectiveness of the safeguard.**Answer: A**

Explanation: The correct answer is "The best possible safeguard should always be implemented, regardless of cost.". Performing a cost-benefit analysis of the proposed safeguard before implementation is vital. The level of security afforded could easily outweigh the value of a proposed safeguard. Other factors need to be considered in the safeguard selection process, such as accountability, auditability, and the level of manual operations needed to maintain or operate the safeguard.

NEW QUESTION: 4A. Option CB. Option BC. Option DD. Option A
Answer: C
Explanation: Monitoring database operations Real-Time Database Operations Monitoring enables you to monitor long running database tasks such as batch jobs, scheduler jobs, and Extraction, Transformation, and Loading (ETL) jobs as a composite business operation. This feature tracks the progress of SQL and PL/SQL queries associated with the business operation being monitored. As a DBA or developer, you can define business operations for monitoring by explicitly specifying the start and end of the operation or implicitly with tags that identify the operation.
