NEW QUESTION: 1 DRAG DROP You are developing a SQL Server Integration Services (SSIS) package that loads data into a data warehouse hosted on Windows Azure SQL Database. You must combine two data sources together by using the ProductID column to provide complete details for each record. The data retrieved from each data source is sorted in ascending order by the ProductID column. You need to develop a data flow that imports the data while meeting the requirements. How should you develop the data flow? (To answer, drag the appropriate transformation from the list of transformations to the correct location in the answer area.)

Answer: Explanation:

NEW QUESTION: 2 You are the data engineer for your company. An application uses a NoSQL database to store data. The database uses the key-value and wide-column NoSQL database type. Developers need to access data in the database using an API. You need to determine which API to use for the database model and type. Which two APIs should you use? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point. **A.** Table API **B.** MongoDB API **C.** Gremlin API **D.** SQL API **E.** Cassandra API **Answer: B, E** Explanation: **B:** Azure Cosmos DB is the globally distributed, multimodel database service from Microsoft for mission-critical applications. It is a multimodel database and supports document, key-value, graph, and columnar data models. **E:** Wide-column stores store data together as columns instead of rows and are optimized for queries over large datasets. The most popular are Cassandra and HBase. References:

<https://www.mongodb.com/scale/types-of-nosql-databases> Topic 1, Proseware Inc Background Proseware, Inc, develops and manages a product named Poll Taker. The product is used for delivering public opinion polling and analysis. Polling data comes from a variety of sources, including online surveys, house-to-house interviews, and booths at public events. Polling data Polling data is stored in one of the two locations: * An on-premises Microsoft SQL Server 2019 database named PollingData * Azure Data Lake Gen 2 Data in Data Lake is queried by using PolyBase Poll metadata Each poll has associated metadata with information about the poll including the date and number of respondents. The data is stored as JSON. Phone-based polling Security * Phone-based poll data must only be uploaded by authorized users from authorized devices * Contractors must not have access to any polling data other than their own * Access to polling data must set on a per-active directory user basis Data migration and loading * All data migration processes must use Azure Data Factory * All data migrations must run automatically during non-business hours * Data migrations must be reliable and retry when needed Performance After six months, raw polling data should be moved to a lower-cost storage

solution.Deployments* All deployments must be performed by using Azure DevOps.
Deployments must use templates used in multiple environments* No credentials or secrets should be used during deploymentsReliabilityAll services and processes must be resilient to a regional Azure outage.MonitoringAll Azure services must be monitored by using Azure Monitor.
On-premises SQL Server performance must be monitored.
