Answer: C Explanation:Explanation/Reference:The data collector is a component installed on a SOL Server server, running all the time or on a user-detlned schedule, and collecting dillerent sets ol data. The data collector then stores the collected data in a relational database known as the management data warehouse. The data collector is a core component ofthe data collection platform for SQL Server 2008 and the tools that are provided by SQL Server. The data collector provides one central point lor data collection across your database servers and applications. This collection point can obtain data from a variety of sources and is not limited solely to performance data, unlike SOL Trace.The data collector enables you to adjust the scope ol data

collection to suit your test and production environments. The data collector also uses a data warehouse, a relational database that enables you to manage the data you collect by setting different retention periods for your data.The data collector supports dynamic tuning for data collection and is extensible through its API.
