**NEW QUESTION: 3**Removing unnecessary processes, segregating inter-process communications, and reducing executing privileges to increase system security is commonly called**A.** Segmenting**B.** Hardening**C.** Aggregating**D.** Kerneling**Answer: B****Explanation:**What is hardening? Naturally, there is more than one definition, but in general, one tightens control using policies which affect authorization, authentication and permissions. Nothing happens by default. You only give out permission after thinking about it, something like "deny all" to everyone, then "allow" with justification. Shut off everything, then only turn on that which

must be turned on. It is not unlike locking every single door, window and access point in your house, then unlocking only those that need to be. It is quite common for users to take all the defaults when their new system gets turned on making for instant vulnerability. A major problem is trying to figure out where all those details are that need to be turned off, without making the system unusable.
