NEW QUESTION: 1You have an Autoscaling Group configured to launch EC2 Instances for your application. But you notice thatthe Autoscaling Group is not launching instances in the right proportion. In fact instances are being launchedtoo fast. What can you do to mitigate this issue? Choose 2 answers from the options given below**A.** Adjust the CPU threshold set for the Autoscaling scale-in and scale-out process.**B.** Set a custom metric which monitors a key application functionality forthe scale-in and scale-out process.**C.** Adjust the cooldown period set for the Autoscaling Group**D.** Adjust the Memory threshold set forthe Autoscaling scale-in and scale-out process.**Answer: B,C**Explanation:ExplanationThe Auto Scaling cooldown period is a configurable setting for your Auto Scaling group that helps to ensurethat Auto Scaling doesn't launch or terminate additional instances before the previous scaling activity takes effect.For more information on the cool down period, please refer to the below link:*
<http://docs>

Related Postsaws.amazon.com/autoscaling/latest/userguide/Cooldown.htmlAlso it is better to monitor the application based on a key feature and then trigger the scale-in and scale-out feature accordingly. In the question, there is no mention of CPU or memory causing the issue.
