NEW QUESTION: 1 Refer to the exhibit. An Enforcement Profile has been created in the Policy Manager as shown. Which action will ClearPass take based on the Enforcement Profile?
A. it will count down 600 seconds and send a RADIUS CoA message to the user to end the user's session after this time is up
B. it will send the Session-Timeout attribute in the RADIUS Access-Request packet to the user and the user's session will be terminated after 600 seconds
C. it will count down 600 seconds and send a RADIUS CoA message to the NAD to end the user's session after this time is up
D. it will send the Session-Timeout attribute in the RADIUS Access-Request packet to the NAD and the NAD will end the user's session after 600 seconds
Answer: B
Explanation: Explanation Session Timeout (in seconds) - Configure the agent session timeout interval to re-evaluate the system health again. OnGuard triggers auto-remediation using this value to enable or disable AV-RTP status check on endpoint. Agent re-authentication is determined based on session-time out value. You can specify the session timeout interval from 60 - 600 seconds. Setting the lower value for session timeout interval results numerous authentication requests in Access Tracker page. The default value is 0. References: http://www.arubanetworks.com/techdocs/ClearPass/Aruba_CPPMOnlineHelp/Content/CPPM_UserGuide/Enfor

NEW QUESTION: 2 While performing data validation of web content, a security technician is required to restrict malicious input. Which of the following processes is an efficient way of restricting malicious input?
A. Validate web content input for extraneous queries.
B. Validate web content input with scanning tools.
C. Validate web content input for query strings.
D. Validate web content input for type, length, and range.
Answer: D

NEW QUESTION: 3 Refer to the exhibit. Which Adjacency Type value should be set when the client endpoint and the service node interface are in a different subnet?
A. Routed
B. Unicast
C. L3D
D. L3Out
Answer: A

NEW QUESTION: 4 **A.** Set-ADReplicationSiteLink
B. Set-ADGroup
C. Set-ADSite
D. Netdom
E. Set-ADForest
F. Set-ADReplicationSite
G. Set-ADDomain
Answer: F
Explanation: The Set-ADReplicationSite cmdlet is used to set the properties for an Active Directory site that is

being used for replication. Sites are used in Active Directory to either enable clients to discover network resources (published shares, domain controllers) close to the physical location of a client computer or to reduce network traffic over wide area network (WAN) links. Sites can also be used to optimize replication between domain controllers. The parameter -ReplicationSchedule<ActiveDirectorySchedule> specifies the default replication schedule for connections within this site (intra-site replication). Incorrect answers: Not A: Set-ADSite is a Microsoft Exchange 2013 command. Use the Set-AdSite cmdlet to configure the Exchange settings of Active Directory sites. Not D: The Set-ADReplicationSiteLink cmdlet sets properties on an Active Directory site link. A site link connects two or more sites. Replication site links reflect the administrative policy for how sites interconnect and the methods used to transfer replication traffic. You must connect sites with site links so that domain controllers at each site can replicate Active Directory changes. Not F: The Set-ADForest cmdlet modifies the properties of an Active Directory forest. Replication cannot be configured with this command. Reference: Technet, Set-ADReplicationSite [https://technet.microsoft.com/en-us/library/hh852305\(v=wps.630\).aspx](https://technet.microsoft.com/en-us/library/hh852305(v=wps.630).aspx)
