But with CRISC exam dump, you do not need to worry about similar problems, But CRISC exam is not so simple, For PDF version everyone knows its use methods.

### **NEW QUESTION: 1**

モバイルチャットアプリケーションを設計しています。メッセージが特定のユーザーによって送信されたことを証明することで、人々がチャットメッセージを偽装できないようにする必要があります。あなたは何をすべきか？ **A.**

信頼できる認証局を使用して、クライアントアプリケーションとサーバー間のSSL接続を有効にします。 **B.**

共有キーを使用したブロックベースの暗号化を使用して、クライアント側でメッセージを暗号化します。 **C.**

公開キー基盤 (PKI) を使用して、元のユーザーの秘密キーを使用してクライアント側のメッセージを暗号化します。 **D.**

メッセージをクライアント側で発信ユーザーIDと宛先ユーザーにタグ付けします。 **Answer: C**  
Explanation: A is not correct because although this would encrypt the message, it does not validate either the client or the server. B is not correct because a malicious actor could spoof the user identifier and destination user information. C is not correct because SSL only requires the server to have a signed certificate and does not require validating the client. D is correct because PKI requires that both the server and the client have signed certificates, validating both the client and the server.

**NEW QUESTION: 2** Which mode does the following statement describe? An LSR will advertise a label mapping immediately, without waiting for a label mapping from the FEC's next-hop. **A.** Liberal label retention mode **B.** Independent control mode **C.** Ordered control mode **D.** Conservative label retention mode **Answer: B** Explanation: Section: Volume C

**NEW QUESTION: 3** A technician has been dispatched to investigate an issue where several users in the same aisle have stated they have had no network connection for over an hour. When the technician gets there, the network seems to be up and running. Which of the following should the technician do NEXT? **A.** Ask the users for more information, such as which applications were not functioning. **B.** Close and document the service call, as there was no actual issue affecting the users. **C.** Power-cycle the switch that the users share to clear out cached DNS records. **D.** Escalate the issue to the network administrator to have their domain credentials reset. **Answer: A** Explanation: Because the system was up and running when the technician reached there, he can ask for applications that were not working or can ask for more information so that he can isolate the problem. Power cycling will not help because the system is already up and recycling can wipe out logs. Escalation will also not help because the system

is now up and running. Closing the call will be unfair because the same instance can occur again.
