NEW QUESTION: 1SIMULATION Fill in the blanks. To view the number of concurrent connections going through core 0 on the firewall, you would use the command and syntax _____. **Answer:** Explanation:fw -i 0 tab -t connections -s

NEW QUESTION: 2Case Study: 4 - Dress4Win Company Overview Dress4win is a web-based company that helps their users organize and manage their personal wardrobe using a website and mobile application. The company also cultivates an active social network that connects their users with designers and retailers. They monetize their services through advertising, e-commerce, referrals, and a freemium app model. Company Background Dress4win's application has grown from a few servers in the founder's garage to several hundred servers and appliances in a colocated data center. However, the capacity of their infrastructure is now insufficient for the application's rapid growth. Because of this growth and the company's desire to innovate faster, Dress4win is committing to a full migration to a public cloud. Solution Concept For the first phase of their migration to the cloud, Dress4win is considering moving their development and test environments. They are also considering building a disaster recovery site, because their current infrastructure is at a single location. They are not sure which components of their architecture they can migrate as is and which components they need to change before migrating them. Existing Technical Environment The Dress4win application is served out of a single data center location. Databases: MySQL - user data, inventory, static data Redis - metadata, social graph, caching Application servers: Tomcat - Java micro-services Nginx - static content Apache Beam - Batch processing Storage appliances: iSCSI for VM hosts Fiber channel SAN - MySQL databases NAS - image storage, logs, backups Apache Hadoop/Spark servers: Data analysis Real-time trending calculations MQ servers: Messaging Social notifications Events Miscellaneous servers: Jenkins, monitoring, bastion hosts, security scanners Business Requirements Build a reliable and reproducible environment with scaled parity of production. Improve security by defining and adhering to a set of security and Identity and Access Management (IAM) best practices for cloud. Improve business agility and speed of innovation through rapid provisioning of new resources. Analyze and optimize architecture for performance in the cloud. Migrate fully to the cloud if all other requirements are met. Technical Requirements Evaluate and choose an automation framework for provisioning resources in cloud. Support failover of the production environment to cloud during an emergency. Identify production services that can migrate to cloud to save capacity. Use managed services whenever possible. Encrypt data on the wire and at rest. Support multiple VPN connections between the

production data center and cloud environment.**CEO Statement**Our investors are concerned about our ability to scale and contain costs with our current infrastructure. They are also concerned that a new competitor could use a public cloud platform to offset their up-front investment and freeing them to focus on developing better features.**CTO Statement**We have invested heavily in the current infrastructure, but much of the equipment is approaching the end of its useful life. We are consistently waiting weeks for new gear to be racked before we can start new projects. Our traffic patterns are highest in the mornings and weekend evenings; during other times, 80% of our capacity is sitting idle.**CFO Statement**Our capital expenditure is now exceeding our quarterly projections. Migrating to the cloud will likely cause an initial increase in spending, but we expect to fully transition before our next hardware refresh cycle. Our total cost of ownership (TCO) analysis over the next 5 years puts a cloud strategy between 30 to 50% lower than our current model.You want to ensure Dress4Win's sales and tax records remain available for infrequent viewing by auditors for at least 10 years.**Cost optimization is your top priority.**Which cloud services should you choose?**A.** BigQuery to store the data, and a web server cluster in a managed instance group to access the data.**Google Cloud SQL mirrored across two distinct regions to store the data, and a Redis cluster in a managed instance group to access the data.****B.** Google Bigtable with US or EU as location to store the data, and gcloud to access the data.**C.** Google Cloud Storage Coldline to store the data, and gsutil to access the data.**D.** Google Cloud Storage Nearline to store the data, and gsutil to access the data.**Answer: C****Explanation:**<https://cloud.google.com/storage/docs/storage-classes>

NEW QUESTION: 3The user has configured AutoScaling based on the dynamic policy. Which of the following is not the right command to specify a change in capacity as a part of the policy?**A.** "adjustment=-1" (type is ChangeInCapacity)**B.** "adjustment=-50" (type is PercentChangeInCapacity)**C.** "adjustment=-8" (type is ExactCapacity)**D.** "adjustment=3" (type is ExactCapacity)**Answer: C****Explanation:**The user can configure the AutoScaling group to automatically scale up and then scale down based on the various specified CloudWatch monitoring conditions. The user needs to provide the adjustment value and the adjustment type. A positive adjustment value increases the current capacity and a negative adjustment value decreases the current capacity. The user can express the change to the current size as an absolute number, an increment or as a percentage of the current group size.In this option specifying the exact capacity with the adjustment value = -8 will not work as when type is exact capacity the adjustment value cannot be negative.**Reference:** <http://docs.aws.amazon.com/AutoScaling/latest/DeveloperGuide/as-scale-based-on-demand.html>
