One more to mention, we can help you make full **Reliable H19-426_V1.0 Test Questions** use of your sporadic time to absorb knowledge and information, The Huawei desktop practice test software and web-based H19-426_V1.0 practice test both simulate the actual exam environment and identify your mistakes.

NEW QUESTION: 1An administrator has been tasked with upgrading a host from ESX 4.1 to ESXi 5. The host is currently configured with a single vSwitch0 with default settings. The upgraded host will have the following new requirements: 1. 116 virtual machines will be connected. 2. Four uplinks configured for port-based load balancing. 3. The switch will include a secondary heartbeat network for HA. Which two statements are true about this configuration? (Choose two.)
A. A change to the properties on vSwitch0 is required
B. The default vSwitch0 is sufficient for this configuration
C. The configuration requires only one VMkernel port
D. The Service Console Port will be removed during the upgrade
Answer: A,D

NEW QUESTION: 2A company has Active Directory Domain Services (AD DS) domain controllers that run on Windows Server 2012 R2 servers. There are two forests, and each has a single domain. There is a two-way forest trust between the forests. The company uses Hyper-V for server virtualization. The Hyper-V environment contains the Hyper-V host servers as shown in the following table: You prepare to deploy System Center 2012 R2 Data Protection Manager (DPM) to back up the Hyper-V environment. The deployment must meet the following requirements: - Ensure that all Hyper-V servers can be backed up from a minimum of two DPM servers - Minimize the total number of DPM servers You need to deploy DPM to the environment. What should you deploy?
A. two DPM servers in the internal network only
B. two DPM servers in the internal network and one DPM server in the perimeter network
C. two DPM servers in the internal network and two DPM servers in the perimeter network
D. four DPM servers in the internal network and two DPM servers in the perimeter network
Answer: A
Explanation: DPM can protect servers and workstations across domains within a forest that has a two-way trust relationship with the domain that the DPM server is located in. If there is not a two-way trust across domains, you can protect the computers using DPM's support for computers in workgroups or untrusted domains. For more information, see Managing Protected Computers in Workgroups and Untrusted Domains. DPM supports data protection across forests as long as you establish a forest-level, two-way trust between the separate forests.
