In case, you fail in certification exam you can claim the refund.

**NEW QUESTION: 1A. Option CB. Option AC. Option DD. Option BAnswer: C**

**NEW QUESTION: 2CORRECT TEXTS0/0 192.168.16.5/30 - Link between Seattle and Chicago  
Secret Password: ciscoS0/0 192.168.54.9/30 - Link between Chicago and NewYorkS0/1  
192.168.16.6/30 - Link between Seattle and Chicago SecrePassword: ciscoS0/1 192.168.54.10/30  
- Link between Chicago and NewYorkLoopback0 172.16.189.189****Answer:** Explanation:Here is the solution below:Explanation:Note: In actual exam, the IP addressing, OSPF areas and process ID, and router hostnames may change, but the overall solution is the same.Seattle's S0/0 IP Address is 192.168.16.5/30. So, we need to find the network address and wildcard mask of 192.168.16.5/30 in order to configure the OSPF.IP Address: 192.168.16.5 /30Subnet Mask: 255.255.255.252Here subtract 252 from 2565, 256-252 = 4, hence the subnets will increment by 4.First, find the 4th octet of the Network Address:The 4th octet of IP address (192.168.16.5) belongs to subnet 1 (4 to 7).Network Address: 192.168.16.4Broadcast Address: 192.168.16.7Lets find the wildcard mask of /30.Subnet Mask: (Network Bits - 1's, Host Bits - 0's)Lets find the wildcard mask of /30:Now we configure OSPF using process ID 10 (note the process ID may change to something else in real exam).Seattle>enablePassword:Seattle#conf t  
Seattle(config)#router ospf 10Seattle(config-router)#network 192.168.16.4 0.0.0.3 area 21One of the tasks states that area 21 should not receive any external or inter-area routes(except the default route).Seattle(config-router)#area 21 stubSeattle(config-router)#endSeattle#copy run startChicago Configuration:Chicago>enablePassword: ciscoChicago#conf t  
Chicago(config)#router ospf 10We need to add Chicago's S0/1 interface to Area 21  
Chicago(config-router)#network 192.168.16.4 0.0.0.3 area 21Again, area 21 should not receive any external or inter-area routes (except the default route).In order to accomplish this, we must stop LSA Type 5 if we don't want to send external routes. And if we don't want to send inter-area routes, we have to stop LSA Type 3 and Type 4. Therefore we want to configure area 21 as a totally stubby area.Chicago(config-router)#area 21 stub no-summary  
Chicago(config-router)#endChicago#copy run startThe other interface on the Chicago router is already configured correctly in this scenario, as well as the New York router so there is nothing that needs to be done on that router.

**NEW QUESTION: 3**You are developing a Windows Presentation Foundation (WPF) application with the following class. (Line numbers are included for reference only.)The UI is not being updated when the Data property is set.You need to ensure that the DisplayData class correctly updates the UI when the Data property is set.What should you do?**A.** Insert the following code at line 15. `NotifyPropertyChanged("Data")`**B.** insert the following line at line 17. `NotifyPropertyChanged(value)`**C.** Insert the following code at line 17. `NotifyPropertyChanged("Data")`**D.** Insert the following code at line 15. `NotifyPropertyChanged(value)`**Answer: D**
