**NEW QUESTION: 1**You plan to build an app that will provide users with the ability to dictate messages and convert the messages into text. You need to recommend a solution to meet the following requirements for the app: \* Must be able to transcribe streaming dictated messages that are longer than 15 seconds. \* Must be able to upload existing recordings to Azure Blob storage to be transcribed later. Which solution should you recommend for each requirement? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Explanation Box 1: The Speech SDK The Speech SDK is not limited to 15 seconds. Box 2: Batch Transcription API Batch transcription is a set of REST API operations that enables you to transcribe a large amount of audio in storage. You can point to audio files with a shared access signature (SAS) URI and asynchronously receive transcription results. With the new v3.0 API, you have the choice of transcribing one or more audio files, or process a whole storage container. Asynchronous speech-to-text transcription is just one of the features.
