NEW QUESTION: 1Which two statements are true regarding the use of Auto Service Request (ASR) with an X6 Database Machine?**A.** The database server ILOMs must have SNMP traps configured to use the management network for notifications to ASR Manager.**B.** The database server ILOMs must use SMTP over the management network for notifications to ASR Manager.**C.** The storage server ILOMs must have SNMP traps configured to use the management network for notifications to ASR Manager.**D.** The database server MS process must have SNMP traps configured to use the management network for notifications to ASR Manager.**Answer: A,C**
Explanation:Explanation/Reference:B: Database Server ILOM plug-inMonitoring databases and their instances, ASM environments, the Grid Infrastructure, and the host software environment are done by Enterprise Manager in the usual way as these are standard targets. But monitoring the hardware for the database servers requires the ILOM plug-in, as there is no Management Server (MS) on the database servers to receive SNMP traps from the ILOM. The plug-in will receive sensor state and availability data from the ILOM including alerts based on pre-set ILOM thresholds.C: Exadata Storage Server plug-in extends the monitoring of exadata cells in addition to providing a GUI interface. The plug-in uses an SSH connection to the cellmonitor user on the cells and uses list commands only. This is for interactive monitoring. One may also set thresholds using the plug-in which are distinct from any thresholds set using cellcli utility as the celladmin user. For alerts to be sent to the plug-in, SNMP traps are used as follows:Cell ILOM alerts are sent to the cell Management Server (MS) via an SNMP trap. The MS then send SNMP notifications onward to the plug-in.Cell alerts flagged by MS itself, such as cell thresholds being exceeded, or ADR software alerts, are sent to the plug-in using SNMP.References:

NEW QUESTION: 2You develop a webpage.The webpage must display a grid that contains one row and five columns. Columns one, three, and five are the same width. Columns two and four are the same width, but much wider than columns one, three, and five. The grid resembles the

following image: The grid must meet the following requirements: * Each row must be tall enough to ensure that images are not cut off. * Each row must contain five columns. * The width of the columns must not change when the screen is resized or rotated. You need to define the style for the grid. Which CSS3 style should you use? **A.** Option **C**. Option **A**. Option **D**. Option **B**

Answer: A

Explanation: Explanation * -ms-grid-rows property auto The height of a row is computed based on the tallest child element in that column. Incorrect: Not A: The width of the columns must not change when the screen is resized or rotated. Not B, Not D: -ms-grid-rows property min-content The minimum height of any child elements is used as the height of the row. Note: * width The width of each column specified as one of the following values: A length consisting of an integer number, followed by an absolute units designator ("cm", "mm", "in", "pt", or "pc") or a relative units designator ("em", "ex", or "px"). A percentage of the object width. A proportion of the remaining horizontal space (that is, the object width, less the combined widths of other tracks), consisting of an integer number followed by a fractional designator ("fr"). For example, if "200px 1fr 2fr" is specified, the first column is allocated 200 pixels, and the second and third columns are allocated 1/3 and 2/3 of the remaining width, respectively.

NEW QUESTION: 3 In which type of access control do user ID and password system come under? **A.** Physical **B.** Power **C.** Technical **D.** Administrative **Answer: C**

NEW QUESTION: 4 Which option is the Cisco recommended method to secure access to the console port? **A.** Configure a very short timeout (less than 100 milliseconds) for the port. **B.** Configure an ACL. **C.** Set the privilege level to a value less than 15. **D.** Configure the activation-character command. **Answer: D**

Explanation: The activation-character command defines a session activation character. Entering this character at a vacant terminal begins a terminal session. The default activation character is the Return key To secure the console port, you should change this character to a different one as most people simply hit the enter key when trying to access the console.
