```

D.

```
function Consultant () {Employee.call(this);}  
Consultant.prototype = new Employee();  
Consultant.prototype.constructor = Consultant;
```

Answer: C,DExplanation:
* Object.prototype.constructor Returns a reference to the Object function that created the instance's prototype. Note that the value of this property is a reference to the function itself, not a string containing the function's name. The value is only read-only for primitive values such as 1, true and "test".
* The constructor property is created together with the function as a single property of func.prototype.
Reference: Object.prototype.constructor
