NEW QUESTION: 1 Which statement is correct about the Java Persistence API support for the SQL queries?
A. Only SELECT SQL queries are required to be supported.
B. SQL queries are expected to be portable across databases.
C. The result of an SQL query is not limited to entities.
D. SQL queries are NOT allowed to use parameters.
Answer: A
Explanation: Explanation/Reference: The Java Persistence Query Language (JPQL) is a platform-independent object-oriented query language defined as part of the Java Persistence API (JPA) specification. In addition to retrieving objects (SELECT queries), JPQL supports set based UPDATE and DELETE queries.
Incorrect: Not B: EntityManager API offers methods for creating instances of Query for executing native SQL statements. The most important thing to understand about native SQL queries created with EntityManager methods is that they, like JPQL queries, return entity instances, rather than database table records.

NEW QUESTION: 2 If the option 'auto-logout-ready' is set to true, in what state will the Agent be logged-out?
A. only from not-ready state except work-related modes such as Aftercallwork or LegalGuard
B. from any state even if Agent is on call
C. only from not-ready state
D. from any state except if Agent is on call
Answer: B

NEW QUESTION: 3 An organization has decided to start using cloud-provided services. Which cloud service allows the organization to install its own operating system on a virtual machine?
A. network-as-a-service
B. platform-as-a-service
C. infrastructure-as-a-service
D. software-as-a-service
Answer: C
Explanation: Below are the 3 cloud supporting services cloud providers provide to customer:
+ SaaS (Software as a Service): SaaS uses the web to deliver applications that are managed by a third-party vendor and whose interface is accessed on the clients' side. Most SaaS applications can be run directly from a web browser without any downloads or installations required, although some require plugins.
+ PaaS (Platform as a Service): are used for applications, and other development, while providing cloud components to software. What developers gain with PaaS is a framework they can build upon to develop or

customize applications. PaaS makes the development, testing, and deployment of applications quick, simple, and cost-effective. With this technology, enterprise operations, or a third-party provider, can manage OSES, virtualization, servers, storage, networking, and the PaaS software itself. Developers, however, manage the applications. + IaaS (Infrastructure as a Service): self-service models for accessing, monitoring, and managing remote datacenter infrastructures, such as compute (virtualized or bare metal), storage, networking, and networking services (e.g. firewalls). Instead of having to purchase hardware outright, users can purchase IaaS based on consumption, similar to electricity or other utility billing. In general, IaaS provides hardware so that an organization can install their own operating system.

NEW QUESTION: 4 What is the purpose of LCP? **A.** to perform authentication **B.** to encapsulate multiple protocols **C.** to specify asynchronous versus synchronous **D.** to negotiate control options **Answer: D** Explanation: In order to be sufficiently versatile to be portable to a wide variety of environments, PPP provides a Link Control Protocol (LCP). The LCP is used to automatically agree upon the encapsulation format options, handle varying limits on sizes of packets, detect a looped-back link and other common misconfiguration errors, and terminate the link. Other optional facilities provided are authentication of the identity of its peer on the link, and determination when a link is functioning properly and when it is failing.
