**NEW QUESTION: 3** Which of the following biometric parameters are better suited for authentication use over a long period of time? **A.** Voice pattern **B.** Iris pattern **C.** Retina pattern **D.** Signature dynamics **Answer: B** Explanation: Explanation/Reference: Explanation: Of the answers given, the iris is the least likely to change over a long period of time which makes the iris pattern better suited for authentication use over a long period of time. The iris is the colored portion of the eye that surrounds the pupil. The iris has unique patterns, rifts, colors, rings, coronas, and furrows. The uniqueness of each of these characteristics within the iris is captured by a camera and compared with the information gathered during the enrollment phase. Of the biometric systems, iris scans are the most accurate. The iris remains constant through adulthood, which reduces the type of errors that can happen during the authentication process. **Incorrect Answers:** B: A person's voice pattern is less suited for authentication use over a long period of time because the voice pattern can change over time. C: A person's signature is less suited for authentication use over a long period of time because the signature can change over time. D: A person's retina pattern is less suited for authentication use over a long period of

time because the retina pattern can change over time and can be changed by illnesses such as Diabetes. References: Harris, Shon, All In One CISSP Exam Guide, 6th Edition, McGraw-Hill, 2013, p. 191
