Closed loop means: \* Defining and managing actionable policies in a governance solution at design-time \* Enforcing these policies via deep integration with a management solution at run-time \* Auditing that these policies are being enforced \* Using industry standards (WS-Policy, WS-MEX) where appropriate for information exchange Closed loop infrastructure enables demand and Value Management \* Collect performance, usage and exception statistics at run-time \* Track these statistics via the governance solution \* Use live, audited information to drive value-based decisions about the effectiveness of different services and organizations \* Provide developers with up to the minute information about a service in runtime to inform their decisions about which services to use \* Manage supply and demand to ensure maximum efficiency and benefit from SOA The products share a common registry and metadata repository to ensure seamless integration and offer active governance. Closed-loop governance will: \* Ensure defined policies are enforced \*\* When you define a policy for a service you have to KNOW categorically that it is being enforced \*\* Generate audit trails for run-time and design-time policy compliance \* Measure the real-world value of SOA \*\* Not just theoretical value \*\* How many applications are using each service, and how much are they using it \*\* NOT how many applications have asked to use a certain capacity of each service \* Manage, monitor and control relationships between consumers and providers \*\* Enforced contracts \*\* Capacity planning Change management The diagram below shows the relationships between SOA governance, security and management, demonstrating how SOA Policy Management forms a closed loop of policy, metrics, and audit.
