More than ever, the professionals are now facing a highly [Dell PowerStore Deploy 2023 Exam](#) competitive world to get their talent recognized enhancing their positions in their work environment.

NEW QUESTION: 1 MapReduce v2 (MRv2/YARN) splits which major functions of the JobTracker into separate daemons? Select two.**A.** MapReduce metric reporting**B.** Heath states checks (heartbeats)**C.** Launching tasks**D.** Job coordination between the ResourceManager and NodeManager**E.** Managing tasks**F.** Managing file system metadata**G.** Resource management**H.** Job scheduling/monitoring**Answer: D,G**Explanation:The fundamental idea of MRv2 is to split up the two major functionalities of theJobTracker, resource management and job scheduling/monitoring, into separate daemons. Theidea is to have a global ResourceManager (RM) and per-application ApplicationMaster (AM). Anapplication is either a single job in the classical sense of Map-Reduce jobs or a DAG of jobs.Note:The central goal of YARN is to clearly separate two things that are unfortunately smushed togetherin current Hadoop, specifically in (mainly) JobTracker:/ Monitoring the status of the cluster with respect to which nodes have which resources available.Under YARN, this will be global./ Managing the parallelization execution of any specific job. Under YARN, this will be doneseparately for each job.Reference: Apache Hadoop YARN - Concepts & Applications

NEW QUESTION: 2A. inspect**B.** queue**C.** pass**D.** police**E.** drop**F.** shape**Answer: A,C,E**
Explanation:
http://www.cisco.com/en/US/products/sw/secursw/ps1018/products_tech_note09186a00808 bc994.shtmlZone-Based Policy Firewall ActionsZFW provides three actions for traffic that traverses from one zone to another:Drop - This is the default action for all traffic, as applied by the "class class-default" that terminates every inspect-type policy-map. Other class-maps

within a policy-map can also be configured to drop unwanted traffic.Traffic that is handled by the drop action is "silently" dropped (i.e., no notification of the drop is sent to the relevant end-host) by the ZFW, as opposed to an ACL's behavior of sending an ICMP "host unreachable" message to the host that sent the denied traffic.Currently, there is not an option to change the "silent drop" behavior. The log option can be added with drop for syslog notification that traffic was dropped by the firewall.Pass - This action allows the router to forward traffic from one zone to another. The pass action does not track the state of connections or sessions within the traffic. Pass only allows the traffic in one direction. A corresponding policy must be applied to allow return traffic to pass in the opposite direction. The pass action is useful for protocols such asIPSec ESP, IPSec AH, ISAKMP, and other inherently secure protocols with predictable behavior. However, most application traffic is better handled in the ZFW with the inspect action.Inspect-The inspect action offers state-based traffic control. For example, if traffic from the private zone to the Internet zone in the earlier example network is inspected, the router maintains connection or session information for TCP and User Datagram Protocol (UDP) traffic. Therefore, the router permits return traffic sent from Internet-zone hosts in reply to private zone connection requests. Also, inspect can provide application inspection and control for certain service protocols that might carry vulnerable or sensitive application traffic.Audit-trail can be applied with a parameter-map to record connection/session start, stop, duration, the data volume transferred, and source and destination addresses.

NEW QUESTION: 3A. Option A**B.** Option D**C.** Option C**D.** Option B**Answer: B,C**Explanation:
