We are deeply committed to meeting the needs of our customers, and **LEED-AP-O-M Practice Exams Free** we constantly focus on customer's satisfaction, This type of feedback is precious and can continue to guide you in your studies.

Your selection on the riht tool to help your pass the LEED-AP-O-M exam and get the according certification matters a lot for the right LEED-AP-O-M exam braindumps will spread you a lot of time and efforts.

Our LEED-AP-O-M exam prep can be done with its high-efficient merit, It suddenly occurs to me that an important exam is coming, There's no better way to effectively prepare other than using actual USGBC LEED-AP-O-M questions provided by us.

Up to now, these materials have attracted thousands of clients all over the world, The three kinds of LEED-AP-O-M learning materials: LEED AP Operations +Maintenance (LEED AP O+M) up to now are all available, Exam CS0-003 Torrent and we will sort out more detailed and valuable versions in the future.

LEED-AP-O-M test material will improve the ability to accurately forecast the topic and proposition trend this year.

**NEW QUESTION: 1**You have been asked to compare parameters of layer 2 MPLS vpn services at two remote ends using the show mpls l2 binding command.What three items of relevant information should you use to ensure that layer two VPN parameters are configured correctly? (Choose three)**A.** MTU**B.** VC type**C.** Local and remote labels**D.** Encapsulation**E.** VC ID**F.** VCCV
**Answer: B,C,F**Explanation:

**NEW QUESTION: 2**Which of the following is a form of Hybrid Cryptography where the sender encrypts the bulk of the data using Symmetric Key cryptography and then communicates securely a copy of the session key to the receiver?**A.** Asymmetric**B.** Symmetric key encryption**C.** Digital Signature**D.** Digital Envelope**Answer: D**Explanation:Explanation/Reference:A Digital Envelope is used to send encrypted information using symmetric keys, and the relevant session key along with it. It is a secure method to send electronic document without compromising the data integrity, authentication and non-repudiation, which were obtained with the use of symmetric keys.A Digital envelope mechanism works as follows:The symmetric key, which is used to encrypt the bulk of the date or message can be referred to as session key. It is simply a symmetric key picked randomly in the key space.In order for the receiver to have the ability to decrypt the message, the session key must be sent to the receiver.This session key cannot be sent in clear text to the receiver, it must be protected while in transit, else anyone who have access to the network could have access to the key and confidentiality can easily be compromised.Therefore, it is critical to encrypt and protect the session key before sending it to the receiver. The session key is encrypted using receiver's public key. Thus providing confidentiality of the key.The encrypted message and the encrypted session key are bundled together and then sent to the receiver who, in turn opens the session key with the receiver matching private key.The session key is then applied to the message to get it in plain text.The process of encrypting bulk data using symmetric key cryptography and encrypting the session key with a public key algorithm is referred as a digital envelope. Sometimes people refer to it as Hybrid Cryptography as well.The following were incorrect answers:Digital-signature - A digital signature is an electronic identification of a person or entity created by using public key algorithm and intended to verify to recipient the integrity of the data and the identity of the sender. Applying a digital signature consist of two simple steps, first you create a message

digest, then you encrypt the message digest with the sender's private key. Encrypting the message digest with the private key is the act of signing the message.Symmetric Key Encryption - Symmetric encryption is the oldest and best-known technique. A secret key, which can be a number, a word, or just a string of random letters, is applied to the text of a message to change the content in a particular way. This might be as simple as shifting each letter by a number of places in the alphabet. As long as both sender and recipient know the secret key, they can encrypt and decrypt all messages that use this key.Asymmetric Key Encryption - The term "asymmetric" stems from the use of different keys to perform these opposite functions, each the inverse of the other - as contrasted with conventional ("symmetric") cryptography which relies on the same key to perform both. Public-key algorithms are based on mathematical problems which currently admit no efficient solution that are inherent in certain integer factorization, discrete logarithm, and elliptic curve relationships. It is computationally easy for a user to generate their own public and private key-pair and to use them for encryption and decryption. The strength lies in the fact that it is "impossible" (computationally unfeasible) for a properly generated private key to be determined from its corresponding public key. Thus the public key may be published without compromising security, whereas the private key must not be revealed to anyone not authorized to read messages or perform digital signatures. Public key algorithms, unlike symmetric key algorithms, do not require a secure initial exchange of one (or more) secret keys between the parties.The following reference(s) were/was used to create this question:CISA review manual 2014 Page number 350 and 351 http://en.wikipedia.org/wiki/Public-key_cryptography

**NEW QUESTION: 3**What default option does a newly created file system have when it is NFS exported?**A.** R/O**B.** R/W**C.** R/X**D.** R/W/X**Answer: B**

**NEW QUESTION: 4**Which of the following are true regarding project scope management?**A.** Scope control involves formalizing the acceptance of project deliverables**B.** Scope definition involves creating a project scope management plan that document how the project scope will be defined and controlled**C.** None of the statements are correct**D.** Scope verification involves subdividing the major project deliverables into small more manageable components**E.** Scope planning involves developing a detailed project scope statement as a basis of future project decision**Answer: C**
