NEW QUESTION: 2You use a desktop computer that has Windows 7 Ultimate SP1. The relevant portions of the computer configuration are shown in the following exhibits:The Disk Management console (Click the Exhibit button.)The System Properties window (Click the Exhibit button.)The System protection for Local Disk C window (Click the Exhibit button.)You encrypt several files on an external USB hard disk drive by using the Encrypting File System (EFS).You need to ensure that you can access the files from another computer.What should you do?**A.** Run the vssadmin list shadows command from the elevated command prompt,**B.** Run the vssadmin list volumes command from the elevated command prompt.**C.** Increase disk space used for system protection.**D.** Set restore settings to Only restore previous versions of files.**E.** Search for the file in the Recycle Bin.**F.** Perform a system restore.**G.** Delete restore points.**H.** Run the compact /U <file_name> command from the elevated command prompt.**I.** Copy the file from a previous version of a folder.**J.** Create a restore point.**K.** Run the cipher /x command from the elevated command prompt,**Answer: K**Explanation:* cipher /x[:efsfile] [<FileName>]Backs up the EFS certificate and keys to the specified file name. If used with :efsfile, /x backs up the user's certificate(s) that were used to encrypt the file. Otherwise, the user's current EFS certificate and keys are backed up.* Back Up Your EFS Key The first time that you use EFS to encrypt something, your system generates a random 256-bit number; that's the key that EFS uses whenever you encrypt something. To back up your EFS key, simply use the Cipher /x command. Cipher will reply with a message asking if you truly want to back up your EFS key-sadly, I haven't found a way to suppress this message. Press OK. The tool will then

prompt you for the name of the file in which to store the backup. Don't specify a file extension; Cipher insists on the .pfx extension. For example, if you picked a file named mybackup, you now have a small file called mybackup.pfx. Next, the tool will prompt you to create a password with which to protect that file. Once you've got that file created, copy it from your computer's hard disk to some offline location (e.g., a USB stick, a CD-ROM) and make a note of the password you've chosen. Now, in the event of unfortunate circumstances- for example, you lose your profile, you forget your password and a systems administrator has to reset it, the system's OS fails and you need to recover files directly from the now-dead system's hard disk-you can simply restore your EFS key by double-clicking the .pfx file and running the resulting wizard. As soon as the wizard is finished, you'll be able to get to your files again.
