NEW QUESTION: 2 **A.** Option **J** **B.** Option **K** **C.** Option **H** **D.** Option **A** **E.** Option **I** **F.** Option **C** **G.** Option **D** **H.** Option **G** **I.** Option **E** **J.** Option **F** **K.** Option **B** **Answer: F, H** Explanation: Explanation Use two fault domains. 2 or 3 is max, depending on which region you are in. Use 20 for platformUpdateDomainCount Increasing the update domain (platformUpdateDomainCount) helps with capacity and availability planning when the platform reboots nodes. A higher number for the pool (20 is max) means that fewer of their nodes in any given availability set would be rebooted at once. References:

NEW QUESTION: 3 A financial institution engaged in mortgage lending has embarked on a business process improvement initiative to eliminate the activities that hinder growth to ultimately improve the success rate of its mortgage business. As a benchmark for identification, the institution is keen on improving any business process that has less than a 75% success rate. The institution has appointed a business analyst (BA) to review the business transactions for the processes of origination, payments, and closures, as well as identify opportunities for improvements and recommend solutions. The BA has collected the following information over the last three months pertaining to these business processes: *All the business processes are at their maximum capacity in terms of the current number of transactions. *Each business process has a certain number of rejects and the reasons for rejection include documentation, verification, collateral, and funding. Funding rejects occur when the bank's customers have failed to make payment of their mortgage processing fee or mortgage closure payment. The BA has also recommended the use of documentation checklists as a solution to eliminate the documentation rejects. If the financial institution always works at full capacity month to month and the new success rate continues to remain the same after implementing the BA's recommendation, what is the average number of successes per month for the mortgage closure process, if the current process capability were increased by 50%? **A. 0** **B. 1** **C. 2** **D. 3** **Answer: A**

NEW QUESTION: 4 What allows a relation to contain multiple rows with a same primary key? **A.** Polymorphism **B.** RDBMS **C.** It is not possible **D.** Polyinstantiation **Answer: D** Explanation: In databases, polyinstantiation is database-related SQL (structured query language) terminology. It allows a relation to contain multiple rows with the same primary key; the multiple instances

are distinguished by their security levels. It occurs because of mandatory policy. Depending on the security level established, one record contains sensitive information, and the other one does not, that is, a user will see the record's information depending on his/her level of confidentiality previously dictated by the company's policy. The following answers are incorrect: An RDBMS is a DBMS in which data is stored in tables and the relationships among the data are also stored in tables. The data can be accessed or reassembled in many different ways without having to change the table forms. Polymorphism (based on the Greek roots "poly" and "morph," meaning many and forms, respectively): allows the ability to overload operators, performing different methods depending on the context of the input message. It is not possible. The following reference(s) were/was used to create this question:
