NEW QUESTION: 2Which three statements are true about the management of Oracle Services?**A. Similar work can be categorized under services to ease workload management.B. To manage workloads or a group of applications, you can define services for a particular application or a subset of an application's operations.C. Users who share a service should have different service-level requirements.D. Oracle Enterprise Manager or SRVCTL should be used to control cluster-managed services, not DBMS_SERVICE.****Answer: A,B,D****Explanation:** Explanation/Reference:Explanation:Using Oracle ServicesTo manage workloads or a group of applications, you can define services that you assign to a particular application or to a subset of an application's operations. You can also group work by type under services.For example, online users can use one service, while batch processing can use another and reporting can use yet another service to connect to the database. Oracle recommends that all users who share a service have the same service level requirements. You can define specific characteristics for services and each service can represent a separate unit of work. There are many options that you can take advantage of when using services. Although you do not have to implement these options, using them helps optimize application performance.Oracle does not recommend using the DBMS_SERVICE package for use with services used by an Oracle RAC database. Use

SRVCTL or Oracle Enterprise Manager to create database services for Oracle RAC. Oracle Real Application Clusters Administration and Deployment Guide

NEW QUESTION: 3 You are reviewing an Azure architecture as shown in the Architecture exhibit (Click the Architecture tab.) The estimated monthly costs for the architecture are shown in the Costs exhibit. (Click the Costs tab.) The log files are generated by user activity to Apache web servers. The log files are in a consistent format. Approximately 1 GB of logs are generated per day. Microsoft Power BI is used to display weekly reports of the user activity. You need to recommend a solution to minimize costs while maintaining the functionality of the architecture. What should you recommend? **A.** Replace Azure Data Factory with CRON jobs that use AzCopy. **B.** Replace Azure Databricks with Azure Machine Learning. **C.** Replace Azure Synapse Analytics and Azure Analysis Services with SQL Server on an Azure virtual machine. **D.** Replace Azure Synapse Analytics with Azure SQL Database Hyperscale. **Answer: A**
Explanation: AzCopy is a command-line utility that you can use to copy blobs or files to or from a storage account. Cron is one of the most useful utility that you can find in any Unix-like operating system. It is used to schedule commands at a specific time. These scheduled commands or tasks are known as "Cron Jobs". Reference: <https://docs.microsoft.com/en-us/azure/storage/common/storage-use-azcopy-configure>
