NEW QUESTION: 1A network needs to implement L3 roaming. On the Master Controller, the administrator, enabled IP mobility, created a Domain and created the HAT table with all the IP addresses of the local controllers. He then enabled Mobility on the VAPs. The configuration was then saved.L3 Mobility is still not working, what could be the cause? (Choose two)**A.** The HAT table must be configured on each controller.**B.** The HAT table must be configured with each controllers supported subnets.**C.** IP Mobility must be enabled on all controllers.**D.** IP-IP tunnels must be configured between controllers.**E.** The Domain must be activated on each controller.
Answer: C,EExplanation:Explanation3-6 - RF Management

NEW QUESTION: 2テキスト分析およびコンピュータービジョンサービスを展開する予定です。Azure Cognitive Servicesは、米国西部および東ヨーロッパのAzureリージョンに展開されます。計画された展開に必要なサービスエンドポイントとAPIキーの最小数を識別する必要があります。何を特定する必要がありますか？ 回答するには、回答エリアで適切なオプションを選択します。注：それぞれの正しい選択には1ポイントの価値があります。**Answer:** Explanation:Explanation Box 1: 2After creating a Cognitive Service resource in the Azure portal, you'll get an endpoint and a key for authenticating your applications. You can access Azure Cognitive Services

through two different resources: A multi-service resource, or a single-service one. Multi-service resource: Access multiple Azure Cognitive Services with a single key and endpoint. Note: You need a key and endpoint for a Text Analytics resource. Azure Cognitive Services are represented by Azure resources that you subscribe to. Each request must include your access key and an HTTP endpoint. The endpoint specifies the region you chose during sign up, the service URL, and a resource used on the request. Box 2: 2 You need at least one key per region. References: <https://docs.microsoft.com/en-us/azure/cognitive-services/cognitive-services-apis-create-account>

NEW QUESTION: 3 You need to resolve the identified issues. Use the drop-down menus to select the answer choice that answers each question based on the information presented in the graphic. **Answer:** Explanation: Explanation From exhibit we see: Cost Threshold of Parallelism: 5 Optimize for Ad Hoc Workloads: false Max Degree of Parallelism: 0 (This is the default setting, which enables the server to determine the maximum degree of parallelism. It is fine.) Locks: 0 Query Wait: -1 Box 1: Optimize for Ad Hoc Workload Change the Optimize for Ad Hoc Workload setting from false to 1/True. The optimize for ad hoc workloads option is used to improve the efficiency of the plan cache for workloads that contain many single use ad hoc batches. When this option is set to 1, the Database Engine stores a small compiled plan stub in the plan cache when a batch is compiled for the first time, instead of the full compiled plan. This helps to relieve memory pressure by not allowing the plan cache to become filled with compiled plans that are not reused.

NEW QUESTION: 4A. Option EB. Option BC. Option DD. Option AE. Option C Answer: E Explanation: To minimize service interruptions when a tier is updated in-place, you can specify more than one upgrade domain in the tier properties. When the tier is updated, VMM updates the virtual machines in the tier according to the upgrade domain to which they belong. VMM upgrades one upgrade domain at a time, shutting down the virtual machines running within the upgrade domain, updating them, bringing them back online, and then moving on to the next upgrade domain. By shutting down only the virtual machines running within the current upgrade domain, VMM ensures that an upgrade takes place with the least possible impact to the running service.
