Areas of Router 5 and 6 are not normal areas, inspect their routing tables and determine which
statement is true? A. R5's Loopback and R6's Loopback are both present in R5's Routing table B.
Only R6's loopback is present in R5's Routing table C. Only R5's loopback is present in R5's
Routing table D. R5's Loopback and R6's Loopback are both present in R6's Routing table E.
Only R5's loopback is present in R6's Routing table
```

Answer: A Explanation:

Explanation/Reference: Explanation: Area 2 (of R5) is a Not-so-Stubby area (NSSA). You can check it by the "show ip ospf" command on R4 or R5 (in Area 2 section). For example, below is the output of "show ip ospf" command on R5: In general, NSSA is same as normal area except that it can generate LSA Type 7 (redistribute from another domain) so we can see both Loopback interfaces of R5 & R6 in the routing table of R5. Note: NSSA does not receive a default route by default so you will not see a default route on R5. Area 3 (of R6) is a Totally-Stubby area so R6 only has one default route to outside world. You can check with the "show ip ospf" command on R4 and R6 (area 3 section): Notice that on R4 you will get more detail (shows "stub area, no summary LSA") than on R6 (only shows "stub area"). R6 is in a totally-stubby area so we will not see any R5's Loopback interfaces in R6 routing table: Note: You can see a default (summary) route to the outside (O*IA 0.0.0.0/0 ...) Even though this exercise looks complicated, it can be solve with simple commands: Q1: show ip ospf database Q2: show ip ospf database int s0/1 Q3: Show ip ospf Q4: show ip ospf and show ip route

NEW QUESTION: 3 You have an Azure subscription. The subscription includes a virtual network named VNet1. Currently, VNet1 does not contain any subnets. You plan to create subnets on VNet1 and to use application security groups to restrict the traffic between the subnets. You need to create the application security groups and to assign them to the subnets. Which four cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order. **Answer:** Explanation:

Explanation Step 1: New-AzureRmNetworkSecurityRuleConfig Step 2:
