**NEW QUESTION: 1** Which statement about the PVLAN is true?  
**A.** Isolated ports cannot communicate with the other promiscuous ports.  
**B.** Promiscuous ports can communicate with all the other type of ports.  
**C.** Isolated ports can communicate with the other isolated ports only.  
**D.** Promiscuous ports can only communicate with other promiscuous ports.  
**E.** Community ports can communicate with the other community ports but not with promiscuous ports.  
**F.** Community ports can communicate with the other promiscuous ports but not with the other community ports.  
**Answer: B**  
**Explanation:** PVLANS provide layer 2 isolation between ports within the same broadcast domain. There are three types of PVLAN ports: - Promiscuous - A promiscuous port can communicate with all interfaces, including the isolated and community ports within a PVLAN. - Isolated - An isolated port has complete Layer 2 separation from the other ports within the same PVLAN, but not from the promiscuous ports. PVLANS block all traffic to isolated ports except traffic from promiscuous ports. Traffic from isolated port is forwarded only to promiscuous ports. - Community - Community ports communicate among themselves and with their promiscuous ports. These interfaces are separated at Layer 2 from all other interfaces in other communities or isolated ports within their PVLAN.

**NEW QUESTION: 2** Which statement is true about designing custom APIs in Oracle Mobile Cloud

Enterprise?**A.** Designing custom APIs entails defining the Node.js implementation in pseudocode.**B.** You may build the REST endpoints of a custom API through a RAML file or via the Endpoints tab on the Custom API page, but you should not mix these approaches.**C.** Custom APIs can be shared across mobile backends through the API catalog.**D.** Custom endpoints built in RAML cannot be edited outside of the Oracle Mobile Cloud Enterprise environment.**Answer: B**

**NEW QUESTION: 3**You have a computer that runs Windows 7. You manually create a system restore point. You need to restore a copy of a file stored on a drive C from two days ago. You must act with minimum administrative effort. What should you do?**A.** From the properties of the file, select Previous Versions.**B.** From recovery, select System Restore.**C.** From Backup and restore, select Restore my files.**D.** From the command prompt, run Wbadmin get items.**Answer: A**  
**Explanation:**How do I view or restore previous versions of a file and folder?Right-click the file or folder, and then click Restore previous versions.You'll see a list of available previous versions of the file or folder. The list will include files saved on a backup (if you're using Windows Backup to back up your files) as well as restore points.To restore a previous version of a file or folder that's included in a library, right-click the file or folder in the location where it's saved, rather than in the library. For example, to restore a previous version of a picture that's included in the Pictures library but is stored in the My Pictures folder, right-click the My Pictures folder, and then click Restore previous versions. For more information about libraries, see Include folders in a library.The Previous Versions tab, showing some previous versions of filesNOT System Restore: System Restore restores system files and settings and does not affect any of your documents, pictures, or other personal data.NOT Backup and Restore: System restore point was created, no backup mentioned.NOT Wbadmin: The Backup And Restore console does not provide a graphical tool for scheduling System Image backups. You need to create a System Image backup manually from the Backup And Restore console whenever you have made significant changes to a computer's configuration. Take care that if you restore a System Image backup and boot from it, or if you make the VHD bootable for failover protection, your computer could be vulnerable unless the System Image includes security updates. Although you cannot use Backup And Restore to schedule System Image backups, you can use the Wbadmin command-line utility to perform this function. For example, to initiate a System Image backup of the C: drive to the H: drive, you run the following command from an elevated command prompt:wbadmin start backup -backuptarget:h: -include:c: -quiet

**NEW QUESTION: 4**Linda would like to have a navigator pane for her XPages application. What would be the best way to implement this pane?**A.** She puts the links for her navigation together by building a custom control and can use that for every page that she needs.**B.** She downloads and installs a JavaScript library for a menu.**C.** She has to build the navigator by using a Notes view with documents defining each link in her navigator. She then integrates that view in each XPage that her application needs.**D.** Unfortunately, there is no simple way to do it, so she has to build it on every XPage.**Answer: A**
