NEW QUESTION: 2An engineer is concerned with the deployment of new application that is sensitive to inter-packet delay variance. Which command configures the router to be the destination of jitter measurements?**A.** Router(config)# ip sla responder tcp-echo 172.29.139.134 5000**B.** Router(config)# ip sla responder udp-connect 172.29.139.134 5000**C.** Router(config)# ip sla responder udp-echo 172.29.139.134 5000**D.** Router(config)# ip sla responder tcp-connect 172.29.139.134 5000**Answer: C**Explanation: Cisco IOS IP SLA Responder is a Cisco IOS Software component whose functionality is to respond to Cisco IOS IP SLA request packets. The IP SLA source sends control packets before the operation starts to establish a connection to the responder. Once the control packet is acknowledged, test packets are sent to the responder. The responder inserts a time-stamp when it receives a packet and factors out the destination processing time and adds time-stamps to the sent packets. This feature allows the calculation of unidirectional packet loss, latency, and jitter measurements with the kind of accuracy that is not possible with ping or other dedicated probe testing.Reference: UDP Jitter measures the delay, delay variation (jitter), corruption, misordering and packet loss by generating periodic UDP traffic. This operation always requires IP SLA responder. The command to enable UDP Jitter Operation is "ip sla responder udp-echo {destination-ip-address} [destination-port]

NEW QUESTION: 3Which two statements are true about 3D support in Oracle database?**A.** The database provides 3D coordinate systems such as Geographic 3D (long, lat, and ellipsoidal

height) and composite systems (based on a two-dimensional system and gravity-related height). **B.** Oracle has introduced new GTYPE and Element type (ETYPE) values to extend sdo_geometry capabilities. **C.** Simple solid and composite solid and now stored in a new object called SDO_PC to allow 3D support within Oracle Spatial database. **D.** Oracle provides support to point clouds and TIN based on the GDAL open source tool. This support is available only via the MapViewer. **Answer: A, C** Explanation: Explanation/Reference: A: The Oracle Spatial support for three-dimensional coordinate reference systems complies with the EPSG model, which provides the following types of coordinate reference systems: Geographic 2D Projected 2D Geographic 3D, which consists of Geographic 2D plus ellipsoidal height, with longitude, latitude, and height based on the same ellipsoid and datum Compound, which consists of either Geographic 2D plus gravity-related height or Projected 2D plus gravity-related height B: Effective with Oracle Database Release 11.1, Oracle Spatial supports the storage and retrieval of three-dimensional spatial data, which can include points, point clouds (collections of points), lines, polygons, surfaces, and solids. To use the subprograms in the SDO_PC_PKG Package (Point Clouds), you must understand the main concepts related to three-dimensional geometries, including the use of point clouds to model solids.
