NEW QUESTION: 1 A trustee committing a breach of trust not liable to pay interest except **A.** (i) & (ii) **B.** (ii) & (iii) **C.** All of the above **D.** Only (ii) **Answer: C**

NEW QUESTION: 2 Your network contains multiple subnets. On one of the subnets, you deploy a server named Server1 that runs Windows Server 2012. You install the DNS Server server role on Server1, and then you create a standard primary zone named contoso.com. You need to ensure that client computers can resolve single-label names to IP addresses. What should you do first?

A. Convert the contoso.com zone to an Active Directory-integrated zone. **B.** Create a GlobalNames zone. **C.** Create a reverse lookup zone. **D.** Configure dynamic updates for contoso.com. **Answer: B**
Explanation: Use GlobalNames zones in Windows Server 2008 to take advantage of single-label names
Providing Single-Label DNS Name Resolution: While Domain Name System (DNS) is the predominant name-resolution technology in TCP/IP networks, Windows Internet Name Service (WINS) is deployed in many networks as an alternative name-resolution protocol. GlobalNames Zone (GNZ) feature: The GNZ feature is designed to enable DNS resolution of these single-label, static, global names. You can deploy a GNZ in a single forest or across multiple forests. GNZ is intended to aid the retirement of WINS. It is not a replacement for WINS. GNZ is not intended to support the single-label name resolution of records that are registered dynamically and therefore not managed by IT administrators. GNZ does make it possible for you to provide single-label name resolution of a fixed set of host computers whose names are guaranteed to be both global and unique.
