NEW QUESTION: 1Data which is properly secured and can be described with terms like genuine or not corrupted from the original refers to data that has a high level of what?**A.** Non-Repudiation**B.** Authorization**C.** Authenticity**D.** Availability**Answer: C****Explanation:** Authenticity refers to the characteristic of a communication, document or any data that ensures the quality of being genuine or not corrupted from the original. The following answers are incorrect: Authorization is wrong because this refers to a user's ability to access data based upon a set of credentials. Availability is wrong because this refers to systems which deliver data that are accessible when and where required by users. Non-Repudiation is wrong because this is where a user cannot deny their actions on data they processed. Classic example is a legal document you signed either manually with a pen or digitally with a signing certificate. If it is signed then you cannot proclaim you did not send the document or do a transaction. The following reference(s) were/was used to create this question: 2011 EC-COUNCIL Official Curriculum, Ethical Hacking and Countermeasures, Volume 1, Module 1, Page. 11

NEW QUESTION: 2You need to complete the GetProcessedOrders() action in the ProcessedOrderController controller to meet the requirements. What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)**Answer: Explanation: Explanation**

NEW QUESTION: 3You need to configure API Management for authentication. Which policy values should you use? To answer, select the appropriate options in the answer area. **NOTE:** Each correct selection is worth one point.**Answer: Explanation: Explanation** Box 1: Validate JWT The validate-jwt policy enforces existence and validity of a JWT extracted from either a specified HTTP Header or a specified query parameter. **Scenario:** User authentication (see step 5 below) The following steps detail the user authentication process: * The user selects Sign in in the website. * The browser redirects the user to the Azure Active Directory (Azure AD) sign in page. * The user signs in. * Azure AD redirects the user's session back to the web application. The URL includes an access token. * The web application calls an API and includes the access token in the authentication header. The application ID is sent as the audience ('aud') claim in the

access token.* The back-end API validates the access token.Box 2: OutboundReference: <https://docs.microsoft.com/en-us/azure/api-management/api-management-access-restriction-policies>

NEW QUESTION: 4A defect was discovered in production and a new sprint item has been created for deploying a hotfix.However, any code change must go through the following steps before going into production:* Scan the code for security breaches, such as password and access key leaks.* Run the code through extensive, long running unit tests.Which source control strategy should a DevOps Engineer use in combination with AWS CodePipeline to complete this process?**A.** Create a hotfix branch from the master branch.
