By unremitting effort and studious research of the D-PSC-DS-23 actual exam, our professionals devised our high quality and high D-PSC-DS-23 effective practice materials which win consensus acceptance around the world.

NEW QUESTION: 1Which two security features are only supported on the Cisco Nexus 7000 Series Switches? (Choose two.)**A.** IP source guard**B.** Dynamic ARP Inspection**C.** CoPP**D.** traffic storm control**E.** NAC**F.** DHCP snooping**Answer: D,E****Explanation:**Explanation/Reference: Explanation:A traffic storm occurs when packets flood the LAN, creating excessive traffic and degrading network performance. You can use the traffic storm control feature to prevent disruptions on Layer 2 ports by a broadcast, multicast, or unicast traffic storm on physical interfaces. Traffic storm control (also called traffic suppression) allows you to monitor the levels of the incoming broadcast, multicast, and unicast traffic over a 10-millisecond interval. During this interval, the traffic level, which is a percentage of the total available bandwidth of the port, is compared with the traffic storm control level that you configured. When the ingress traffic reaches the traffic storm control level that is configured on the port, traffic storm control drops the traffic until the interval ends.
