NEW QUESTION: 1 Instructions For both the Router and the Switch the simulated console mode needs to start and remain in enabled mode. RouterA and SwitchA have been configured to operate in a private network which will connect to the Internet. You have been asked to review the configuration prior to cabling and implementation. This task requires the use of various IOS commands to access and inspect the running configuration of RouterA and SwitchA. No configuration changes are necessary. You will connect to RouterA and SwitchA via the console devices that are attached to each. There are 4 multiple-choice questions with this task. Be sure to answer all of them before leaving this item. In order to score the maximum points you will need to have accessed both SwitchA and RouterA. NOTE: The configuration command has been disabled for both the router and switch in this simulation. Which of the following is true regarding the configuration of SwitchA? **A.** only connections from the local network will be possible **B.** only 5 simultaneous remote connections are possible **C.** remote connections using ssh will require a username and password **D.** console access to SwitchA requires a password **Answer: C** Explanation: Explanation/Reference: Explanation: SWITCH A CONFIGURATION!! no service password-encryption! hostname switch1 enable password cisco username cisco user password 0 cisco ip domain-name cisco.com banner login
