**NEW QUESTION: 1**After you deploy SAF in a mega cluster and you verify that TCP port 5050 is open, you notice that SAF connections are failing.Which two functions must you check to troubleshoot the problem? (Choose Two)**A.** Cisco AXL Web Service**B.** CCD Requesting Service**C.** CCD Advertising Service**D.** SMTP Server**E.** Cisco UP XCP Router Service**F.** Connection Conversation Messenger**Answer: B,C**

**NEW QUESTION: 2**Your network contains one Active Directory forest that has a root domain and three child domains.All domain controllers run Windows Server 2003 Service Pack 1 (SP1). Each domain has a different password policy.The domain is configured as shown in the exhibit. You plan to reduce the number of domains in the forest.You need to plan the restructuring of the forest to meet the following requirements:-Maintain all existing password policies. -Maintain all existing user account attributes.What should you include in your plan? Exhibit:**A.** Upgrade the forest root domain to Windows Server 2008. Use the Active Directory Migration Tool (ADMT) to migrate user accounts that contain SID history from the child domains to the forest root domain. Remove the child domains.**B.** Upgrade the forest root domain to Windows Server 2008. Use the Active Directory Migration Tool (ADMT) to migrate user accounts from the child domains to the forest root domain, and then remove the child domains. Enable fine-grained password policies.**C.** Upgrade all domains to Windows Server 2008 and enable SID history. Move all user accounts from the child domains to the root domain by using the movetree.exe tool, and then remove the child domains.**D.** Upgrade all domains to Windows Server 2008. Redirect the users container in the root domain by using the redirusr.exe tool, and then remove the child domains. Enable fine- grained password policies.**Answer: B****Explanation:** ADMT + fine-grainedThe Active Directory Migration Tool version 3 (ADMT v3) simplifies the process of restructuring your operating environment to meet the needs of your organization. You can use ADMT v3 to migrate users, groups, and computers from Microsoft@ Windows NT@ 4.0 domains to Active Directory@ directory service domains; between Active Directory domains in different forests (interforest migration); and between Active Directory domains in the same forest (intraforest migration). ADMT v3 also performs security translation from Windows NT 4.0 domains to Active Directory domains and between Active Directory domains in different forests.The Windows Server@ 2008 operating system provides organizations with a way to define different password and account lockout policies for different sets of users in a domain.

In Microsoft@ Windows@ 2000 and Windows Server@ 2003 Active Directory domains, only one password policy and account lockout policy could be applied to all users in the domain. These policies were specified in the Default Domain Policy for the domain. As a result, organizations that wanted different password and account lockout settings for different sets of users had to either create a password filter or deploy multiple domains. Both options are costly for different reasons.

**NEW QUESTION: 3**Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.You are tuning the performance of a virtual machine that hosts a Microsoft SQL Server instance.The virtual machine originally had four CPU cores and now has 32 CPU cores.The SQL Server instance uses the default settings and has an OLTP database named db1. The largest table in db1 is a key value store table named table1.Several reports use the PIVOT statement and access more than 100 million rows in table1.You discover that when the reports run, there are PAGELATCH\_IO waits on PFS pages 2:1:1, 2:2:1, 2:3:1, and 2:4:1 within the tempdb database.You need to prevent the PAGELATCH\_IO waits from occurring.Solution: You add more files to tempdb.Does this solution meet the goal?**A. No****B. Yes****Answer: A**
