**NEW QUESTION: 2** Which statement initializes a stringBuilder to a capacity of 128? **A.**

StringBuilder sb = new StringBuilder (128); **B.** StringBuilder sb = new String ("128"); **C.**

StringBuilder sb = StringBuilder.setCapacity (128); **D.** StringBuilder sb =

StringBuilder.getInstance (128); **Answer: A** Explanation: Explanation/Reference: Explanation:

StringBuilder(int capacity) Constructs a string builder with no characters in it and an initial capacity specified by the capacity argument. Note: An instance of a StringBuilder is a mutable sequence of characters. The principal operations on a StringBuilder are the append and insert methods, which are overloaded so as to accept data of any type. Each effectively converts a given datum to a string and then appends or inserts the characters of that string to the string builder. The append method always adds these characters at the end of the builder; the insert method adds the characters at a specified point. Incorrect answers: StringBuilder sb = new String("128"); StringBuilder not String is required. setCapacity or getInstance do not work.

**NEW QUESTION: 3** A. Yes **B.** No **Answer: B**
