NEW QUESTION: 1You need to recommend a platform architecture for a big data solution that meets the following requirements: Supports batch processing Provides a holding area for a 3-petabyte (PB) dataset Minimizes the development effort to implement the solution Provides near real time relational querying across a multi-terabyte (TB) dataset Which two platform architectures should you include in the recommendation? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point. **A.** a Microsoft Azure HDInsight Storm cluster **B.** Microsoft Azure Table Storage **C.** a Microsoft SQL Server database **D.** a Microsoft Azure HDInsight Hadoop cluster **E.** a Microsoft Azure SQL data warehouse **Answer: B,E**
Explanation: Explanation A: Azure SQL Data Warehouse is a SQL-based, fully-managed, petabyte-scale cloud data warehouse. It's highly elastic, and it enables you to set up in minutes and scale capacity in seconds. Scale compute and storage independently, which allows you to burst compute for complex analytical workloads, or scale down your warehouse for archival scenarios, and pay based on what you're using instead of being locked into predefined cluster configurations-and get more cost efficiency versus traditional data warehouse solutions. E: Use Azure Table storage to store petabytes of semi-structured data and keep costs down. Unlike many data stores-on-premises or cloud-based-Table storage lets you scale up without having to manually shard your dataset. Perform OData-based queries.

NEW QUESTION: 2You have an Exchange Server 2013 organization that contains two Edge Transport servers. The Edge Transport servers are configured to perform recipient filtering. You deploy a new Edge Transport server named Edge3. You need to ensure that Edge3 performs recipient filtering. What should you do? **A.** Run the ExportEdgeConfig.ps1 and the ImportEdgeConfig.ps1 scripts. **B.** Create a new Edge Subscription for Edge3. **C.** Run the Set-TransportConfig cmdlet on Edge3. **D.** Export the Edge Subscription from an existing Edge Transport server and import the Edge Subscription to Edge3. **Answer: A**
Explanation/Reference: Explanation: We copy the configuration from an existing Edge Transport server with the ExportEdgeConfig.ps1 script and apply to new server Edge3 with ImportEdgeConfig.ps1 script. Note: Configure Edge Transport server using cloned configuration You can use the provided Exchange Management Shell scripts (located in %ExchangeInstallPath%Scripts) to duplicate the configuration of an Edge Transport server. This process is referred to as cloned configuration. Cloned configuration is the practice of deploying new Edge Transport servers based on configuration information from a previously configured source server. The configuration information from the previously configured source server is copied and exported to an XML file, which is then imported to the target server. Two Shell scripts are used to perform cloned configuration tasks: ExportEdgeConfig.ps1 Exports all user-configured settings and data from an Edge Transport server and stores that data in an XML file. ImportEdgeConfig.ps1 During the validate configuration step, the ImportEdgeConfig.ps1 script checks the exported XML file to see whether the server-specific export settings are valid for the target server.
