NEW QUESTION: 1 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com.You create an Azure Advanced Threat Protection (ATP) workspace named Workspace1.The tenant contains the users shown in the following table.You need to modify the configuration of the Azure ATP sensors.Solution: You instruct User2 to modify the Azure ATP sensor configuration.Does this meet the goal?**A.** No**B.** Yes**Answer: A**

NEW QUESTION: 2 On which platform(s) is FAST Cache available?**A.** Unity hybrid systems only **B.** Physical Unity systems only**C.** Physical and UnityVSA systems**D.** All Flash Unity systems only **Answer: A**Explanation:ExplanationReferences: https://www.emc.com/collateral/white-papers/h15084-dell-emc-unity-introduction-to-the-platform.pdf

NEW QUESTION: 3HOTSPOTSelect the appropriate attack from each drop down list to label the corresponding illustrated attack Instructions: Attacks may only be used once, and will disappear from drop down list if selected.When you have completed the simulation, please select the Done button to submit.Hot Area:**Answer:** Explanation:Explanation/Reference:1: Spear phishing is an e-mail spoofing fraud attempt that targets a specific organization, seeking unauthorized access to confidential data. As with the e-mail messages used in regular phishing

expeditions, spear phishing messages appear to come from a trusted source. Phishing messages usually appear to come from a large and well-known company or Website with a broad membership base, such as eBay or PayPal. In the case of spear phishing, however, the apparent source of the e-mail is likely to be an individual within the recipient's own company and generally someone in a position of authority.2: The Hoax in this question is designed to make people believe that the fake AV (anti-virus) software is genuine.3: Vishing is the act of using the telephone in an attempt to scam the user into surrendering private information that will be used for identity theft. The scammer usually pretends to be a legitimate business, and fools the victim into thinking he or she will profit.4: Phishing is the act of sending an email to a user falsely claiming to be an established legitimate enterprise in an attempt to scam the user into surrendering private information that will be used for identity theft.Phishing email will direct the user to visit a website where they are asked to update personal information, such as a password, credit card, social security, or bank account numbers, that the legitimate organization already has. The website, however, is bogus and set up only to steal the information the user enters on the page.5: Similar in nature to e-mail phishing, pharming seeks to obtain personal or private (usually financial related) information through domain spoofing. Rather than being spammed with malicious and mischievous e-mail requests for you to visit spoof Websites which appear legitimate, pharming 'poisons' a DNS server by infusing false information into the DNS server, resulting in a user's request being redirected elsewhere. Your browser, however will show you are at the correct Website, which makes pharming a bit more serious and more difficult to detect. Phishing attempts to scam people one at a time with an e-mail while pharming allows the scammers to target large groups of people at one time through domain spoofing.References:
