NEW QUESTION: 3 You manage a network that includes an on-premises Active Directory Domain Services domain and an Azure Active Directory (Azure AD). Employees are required to use different accounts when using on-premises or cloud resources. You must recommend a solution that lets employees sign in to all company resources by using a single account. The solution must implement an identity provider. You need provide guidance on the different identity providers. How should you describe each identity provider? To answer, select the appropriate description from each list in the answer area. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Explanation: Box1: User management occurs on-premises. Azure AD authenticates employees by using on-premises passwords. Azure AD Domain Services for hybrid organizations Organizations with a hybrid IT infrastructure consume a mix of cloud resources and on-premises resources. Such organizations synchronize identity information from their on-premises directory to their Azure AD tenant. As hybrid organizations look to migrate more of their on-premises applications to the cloud, especially legacy directory-aware

applications, Azure AD Domain Services can be useful to them. Example: Litware Corporation has deployed Azure AD Connect, to synchronize identity information from their on-premises directory to their Azure AD tenant. The identity information that is synchronized includes user accounts, their credential hashes for authentication (password hash sync) and group memberships. User accounts, group memberships, and credentials from Litware's on-premises directory are synchronized to Azure AD via Azure AD Connect. These user accounts, group memberships, and credentials are automatically available within the managed domain. Box 2: User management occurs on-premises. The on-premises domain controller authenticates employee credentials. You can federate your on-premises environment with Azure AD and use this federation for authentication and authorization. This sign-in method ensures that all user authentication occurs on-premises. References:
