NEW QUESTION: 1 Which of the following is not an EPA-approved replacement for Halon?**A.** FM-200**B.** Bromine**C.** Innergen**D.** FE-13**Answer: B****Explanation:** Halon is a compound consisting of bromine, fluorine, and carbon. Halons are used as fire extinguishing agents, both in built-in systems and in handheld portable fire extinguishers. Halon production in the U.S. ended on December 31, 1993, because they contribute to ozone depletion. Bromine being part of Halon is not a safe replacement for Halon. The following are some of the EPA-approved replacements for halon: Several substitutes have been approved by the SNAP program that may be considered as potential candidates for specific use conditions as cited in 40 CFR 82 Appendix A to Subpart G, Substitutes Subject to Use Restrictions and Unacceptable Substitutes. It should be noted that the following substitutions are merely comments on usage and not conditions. For example, the Army has considered the use of HFC-125 in the crew compartments of its ground combat vehicles. Also, the Army has installed IG-541 in normally occupied areas. The following substitutes are listed: Total Flooding Agents Acceptable Substitutes Water Mist Systems using Potable or Natural Sea Water [Foam] A (formerly identified as Water Mist Surfactant Blend A) This agent is not a clean agent, but is a low-density, short duration foam. Carbon Dioxide (Must meet NFPA 12 and OSHA 1910.162(b)5 requirements Water Sprinklers Total Flooding Agents Substitutes Acceptable Subject To Use Conditions Normally Occupied Areas C4F10 (PFC-410 or CEA-410) C3F8 (PFC-218 or CEA-308) HCFC Blend A (NAF S-III) HFC-23 (FE 13) HFC-227ea (FM 200) IG-01 (Argon) IG-55 (Aragonite) HFC-125 HFC-134a Normally Unoccupied Areas Powdered Aerosol CCF3I HCFC-22 HCFC-124 HFC-125 HFC-134a Gelled Halocarbon/Dry Chem. Suspension (PGA) Inert Gas/Powdered Aerosol Blend (FS 0140) IG-541 (Inergen) Unacceptable Substitutes HFC-32 The following were incorrect answers: The following are all safe replacement for Halon: FE-13 is an Halon replacement (Halon 1301) in total flooding and inerting applications where its low toxicity provides for improved safety margins, the protected spaces are large, the cylinder storage area is remote from the protected space, or where the temperatures are likely to go below 0(o)C (32(o)F). Of the clean agents available, DuPont FE-13 has the lowest toxicity and is the safest for protecting areas where people are present. DuPont FE-13 provides the ultimate in human safety while protecting high-value assets and business continuity with a clean agent. DuPont FE-13 is: safe for people a clean agent that does not leave a residue electrically nonconductive and noncorrosive an environmentally preferred alternative to Halon with zero

ozone depletion potential (ODP) FM-200 is a colorless, liquefied compressed gas. It is stored as a liquid and dispensed into the hazard as a colorless, electrically non-conductive vapor that is clear and does not obscure vision. It leaves no residue and has acceptable toxicity for use in occupied spaces at design concentration. FM-200 does not displace oxygen and, therefore, is safe for use in occupied spaces without fear of oxygen deprivation. INERGEN is a blend of inert atmospheric gases that contains 52% nitrogen, 40% argon, 8% carbon dioxide, used for fire suppression system agent. It is considered a clean agent for use in gaseous fire suppression applications. Inergen does not contain halocarbons, and has no ozone depletion potential. It is non-toxic. Inergen is used at design concentrations of 35-50% to lower the concentration of oxygen to a point that cannot support combustion, but still safe for humans.
