**NEW QUESTION: 3** Refer to the exhibit. Which two changes must you make to the given IOS site-to-site VPN configuration to enable the routers to form a connection? (Choose two.)**A.** Configure Router B's ISAKMP policy to match the policy on Router A.**B.** Configure the access list on Router B to mirror Router A.**C.** Configure the tunnel modes on the two routers to match.**D.** Configure a valid route on Router**Answer: B,C**Explanation: You must configure symmetric crypto ACLs for use by IPsec. Both inbound and outbound traffic are evaluated against the same outbound IPsec ACL. The ACL criteria are applied in the forward direction to traffic exiting your router, and the reverse direction to traffic entering your router. When a router receives encrypted packets back from an IPsec peer, it uses the same ACL to determine which inbound packets to decrypt by viewing the source and destination addresses in the ACL in reverse order. Note Important: The crypto ACLs used by IPsec must mirror-image ACLs because both inbound and outbound traffic is evaluated against the same outbound IPsec ACL. Also, the tunnel modes must match on each end. Here we see that Router A is using transport mode while Router B is configured for tunnel mode.Reference:
