What we collect: We may collect the following information: **CTFL-Foundation Interactive Testing Engine** full name email address What we do with the information we gather: We require this information to understand your needs and provide you [CTFL-Foundation](#) with a better service, and in particular for the following reasons: Internal record keeping.

NEW QUESTION: 1An architect is designing a new VMware software-defined data center (SDDC) that will consist of 100 branch sites connected to a single VMware vCenter Server within the primary data center. To allow for the use of existing automation scripts, there is a requirement to replicate the names of the virtual distributed port groups across all sites. The procurement team purchases licensing and there is no further budget allocated. Which design decision should the architect make to meet this requirement?
A. The automation script will be updated to reflect unique naming for each site
B. A new vCenter Server will be deployed for each branch site
C. A new virtual data center will be created for each branch site
D. A new host and cluster folder will be created for each branch site
Answer: D

NEW QUESTION: 2You administer a Microsoft SQL Server 2016 instance. You need to stop a blocking process that has an SPID of 64 without stopping other processes. What should you do?
A. Execute the following Transact-SQL statement: ALTER SESSION KILL '64'
B. Restart the SQL Server service.
C. Execute the following Transact-SQL statement: KILL 64
D. Execute the following Transact-SQL statement: EXECUTE sp_KillSPID 64
Answer: C
Explanation/Reference: Explanation: KILL can be used to terminate a normal connection, which internally terminates the transactions that are associated with the specified session ID.
